

Full detailed APIs For Each Module as well as detailed description for each Typedef : “ECU_2”

1)DIO_Module:

```

/*****
*   \Description : function to set configuration for all Dio of Mcu and
*                   it's Alternative Functions
*   \sync\Async : Synchronous
*   \Reentrancy : Reentrant
*   \Parameters (in) : Pointer to Struct
*   \Parameters (out): void
*   \Return value : void
*****/

void Dio_Init(const Dio_ConfigType* ConfigPtr );

/*****
*   \Description: function to read any DIO Channel which takes ID of Channel and return level
*   \sync\Async: Synchronous
*   \Reentrancy: Reentrant
*   \Parameters(in): DIO Channel Type "Enum"
*   \Parameters (out): DIO_LevelType
*****/

Dio_LevelType Dio_ReadChannel(Dio_ChannelType ChannelId);
```

```

/*****
*   \Description : function to write on any Channel"Pin" which takes Pin no. and level
*   \sync\Async : Synchronous
*   \Reentrancy : Reentrant
*   \Parameters (in): Channel ID "of type Dio_ChannelType" & DIO Level "of typeDio_LevelType"
*   \Parameters (out): void
*   \Return value : void
*****/

void DIO_WriteChannel(Dio_ChannelType ChannelId , Dio_LevelType Level);

```

2)TIMER_Module:

```

/*****
*   \Description      : function to set Timer Configurations
*   \sync\Async       : Synchronous
*   \Reentrancy       : Reentrant
*   \Parameters (in) : const Gpt_ConfigType*ConfigPtr "Pointer to struct"
*   \Parameters (out): void
*****/

void Gpt_Init(const Gpt_ConfigType*ConfigPtr);

/*****
*   \syntax:
*   \Description      : function to Disable Timer Interrupts in Run Time
*   \sync\Async       : Synchronous
*   \Reentrancy       : Non-Reentrant
*   \Parameters (in) : Gpt_ChannelType Channel "Timer ID "
*   \Parameters (out): void
*****/

void Gpt_DisableNotification(Gpt_ChannelType Channel)

/*****

```

```

*   \Description      :   function to Enable Timer Interrupts in Run Time
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Non-Reentrant
*   \Parameters (in) :   Gpt_ChannelType Channel "Timer ID "
*   \Parameters (out):   void
*****/

void Gpt_EnableNotification(Gpt_ChannelType Channel);

/*****

*   \Description      :   function to Start Timer Count
*   \sync\Async       :   ASynchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   Gpt_ChannelType Channel "Timer ID " , Gpt_ValueType Value
                        "No.of Counts in Tick"
*   \Parameters (out):   void
*****

void Gpt_StartTimer(Gpt_ChannelType Channel , Gpt_ValueType Value);

/*****

*   \Description      :   function to Stop Timer Count
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   Gpt_ChannelType Channel "Timer ID "
*   \Parameters (out):   void
*****

void Gpt_StopTimer(Gpt_ChannelType Channel);

*****/

```

```

*   \Description      :   function to Get Time Elapsed from Beginning of Count
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   Gpt_ChannelType Channel "Timer ID "
*   \Parameters (out):   Gpt_ValueType  "uint 32"
*****

Gpt_ValueType Gpt_GetTimeElapsed(Gpt_ChannelType Channel);

```

3)CAN_Module:

```

/*****

*   \Description      :   function to Initialize CAN Module.
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   CAN_ConfigType* Config_Ptr "Pointer to Cofiguration Struct"
*   \Parameters (out):   void
*****

void CAN_Init(CAN_ConfigType* Config_Ptr);

/*****

*   \Description      :   function to DeIntialize CAN_Module and Stop it.
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****/

void CAN_Deinit(void);

/*****

*   \Description      :   function to Send Data

```

```

*   \sync\Async      :   Synchronous
*   \Reentrancy      :   Non-Reentrant
*   \Parameters (in) : Can_DataType Data "Data to be send"
*   \Parameters (out): void
*****

void CAN_SendData(Can_DataType Data);

/*****
*   \Description      :   function to Receive Data from CAN Bus
*   \sync\Async      :   Synchronous
*   \Reentrancy      :   Non_Reentrant
*   \Parameters (in) :   void
*   \Parameters (out): Can_DataType
*****

CAN_DataType CAN_ReceiveData (void);

```

4)Light:

```

/*****
*   \Description:   function to Intialize Light Module "RL & LL Pins Direction"
*   \sync\Async :   Synchronous
*   \Reentrancy :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out): void
*****/

void Light_Init (void);

/*****
*   \Description      :   function to Get light status

```

```

*   \sync\Async      : Synchronous
*   \Reentrancy      : Reentrant
*   \Parameters (in) : Light_Type light
*   \Parameters (out): Boolean
*****/

Boolean Get_LightStatus(Light_Type light);

/*****

*   \Description      : function to Set light status
*   \sync\Async      : Synchronous
*   \Reentrancy      : Reentrant
*   \Parameters (in) : Light_Type light
*   \Parameters (out): void
*****/

void Set_LightStatus(Light_Type light);

/*****

*   \Description      : function to Start light Timer
*   \sync\Async      : ASynchronous
*   \Reentrancy      : Reentrant
*   \Parameters (in) : void
*   \Parameters (out): void
*****/

void Light_StartLightTimer(void);

/*****

*   \Description      : function to Stop light Timer
*   \sync\Async      : Synchronous
*   \Reentrancy      : Reentrant

```

```

*   \Parameters (in) :   void
*   \Parameters (out):  void
*****/
void Light_StopLightTimer(void);

```

4)Buzzer:

```

/*****
*   \Description:  function to Intialize Buzzer Module
*   \sync\Async :  Synchronous
*   \Reentrancy  :  Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):  void
*****/

void Buzzer_Init(void);

```

```

/*****
*   \Description      :  function to Set Buzzer status
*   \sync\Async       :  Synchronous
*   \Reentrancy       :  Reentrant
*   \Parameters (in) :  Buzzer_Type light
*   \Parameters (out):  void
*****/

void Set_BuzzerStatus(Buzzer_Type Buzzer);

```

4)Comm._Mng.:

```

/*****
*   \Description      :  function to Manage Interactions between App and Mcal
*   \sync\Async       :  Synchronous

```

```

*   \Reentrancy      :   Non_Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   E_Ok
*
*                       :   E_Nok
*****/
Mng_DataType CommMgr_Recieve(u8 Bus_Id ) ;

```

5)Car_Control:

```

/*****
*   \Description      :   function to Initialize All Car_modules
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****

void CarControl_Init(void);

/*****
*   \Description      :   function to process and control Right and Left lights
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****

void CarControl_lightProcessing (void);

/*****
*   \Description      :   function to process Receiving Data
*   \sync\Async       :   Synchronous

```

```

*   \Reentrancy      : Reentrant
*   \Parameters (in) : void
*   \Parameters (out): void
*****/

void CarControl_CanReciever (void);

/*****
*   \Description      : function to process and control Buzzer
*   \sync\Async       : Synchronous
*   \Reentrancy       : Reentrant
*   \Parameters (in) : void
*   \Parameters (out): void
*****/

void CarControl_BuzzerProcessing (void);

```
