

Full detailed APIs For Each Module as well as detailed description for each Typedef : “ECU_1”

1)DIO_Module:

```

/*****
*   \Description :   function to set configuration for all Dio of Mcu and
*                   it's Alternative Functions
*
*   \sync\Async   :   Synchronous
*
*   \Reentrancy   :   Reentrant
*
*   \Parameters (in) : Pointer to Struct
*
*   \Parameters (out): void
*
*   \Return value   :   void
*****/

void Dio_Init(const Dio_ConfigType* ConfigPtr );

/*****
*   \Description: function to read any DIO Channel which takes ID of Channel and return level
*
*   \sync\Async: Synchronous
*
*   \Reentrancy: Reentrant
*
*   \Parameters(in): DIO_ChannelType "Enum"
*
*   \Parameters (out): DIO_LevelType
*****/

Dio_LevelType Dio_ReadChannel(Dio_ChannelType ChannelId);
```

```

/*****
*   \Description : function to write on any Channel"Pin" which takes Pin no. and level
*   \sync\Async : Synchronous
*   \Reentrancy : Reentrant
*   \Parameters (in): Channel ID "of type Dio_ChannelType" & DIO Level "of typeDio_LevelType"
*   \Parameters (out): void
*   \Return value : void
*****/

void DIO_WriteChannel(Dio_ChannelType ChannelId , Dio_LevelType Level);

```

2)ICU_Module:

```

/*****
*   \Description      : function to set ICU Configurations
*   \sync\Async       : Synchronous
*   \Reentrancy       : Reentrant
*   \Parameters (in) : const Icu_ConfigType*ConfigPtr "Pointer to struct"
*   \Parameters (out): void
*****/

void Icu_Init(const Icu_ConfigType*ConfigPtr);

/*****
*   \Description      : function to Start Icu Count
*   \sync\Async       : ASynchronous
*   \Reentrancy       : Reentrant
*   \Parameters (in) : Icu_ChannelType Channel "Timer ID "
*   \Parameters (out): void
*****/

void Icu_StartTimer(Icu_ChannelType Channel );

```

```

/*****
*   \Description      :   function to Stop Timer Count
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   Icu_ChannelType Channel "Timer ID "
*   \Parameters (out):   void
*****/

void Icu_StopTimer(Icu_ChannelType Channel);

/*****
*   \Description      :   function to Get Input Capture value.
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   Icu_ChannelType Channel "Timer ID "
*   \Parameters (out):   Icu_ValueType "uint 32"
*****/

Icu_ValueType Icu_getInputCaptureValue (Icu_ChannelType Channel);

/*****
*   \syntax:
*   \Description      :   function to Set Required Edge Detection
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   Icu_EdgeType EdgeType
*   \Parameters (out):   void
*****/

void Icu_SetEdgeDetection (Icu_EdgeType EdgeType);

```

```

/*****
*   \Description      : function to clear Timer Value.
*   \sync\Async       : Synchronous
*   \Reentrancy       : Reentrant
*   \Parameters (in) : Icu_ChannelType Channel "Timer ID "
*   \Parameters (out): void
*****/

void Icu_ClearTimerValue(Icu_ChannelType Channel);

/*****
*   \Description      : function to set call back.
*   \sync\Async       : Synchronous
*   \Reentrancy       : Reentrant
*   \Parameters (in) : ( void (*a_ptr)void ); //pointer to func from app.
*   \Parameters (out): void
*****/

void Icu_SetCallBack ( void (*app_ptr)void );

```

3)CAN_Module:

```

/*****
*   \Description      : function to Initialize CAN Module.
*   \sync\Async       : Synchronous
*   \Reentrancy       : Reentrant
*   \Parameters (in) : CAN_ConfigType* Config_Ptr "Pointer to Cofiguration Struct"
*   \Parameters (out): void
*****/

void CAN_Init(CAN_ConfigType* Config_Ptr);

```

```

/*****
*   \Description      :   function to DeIntialize CAN_Module and Stop it.
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****/
void Can_Deinit(void);

/*****
*   \Description      :   function to Send Data
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Non-Reentrant
*   \Parameters (in) :   Can_DataType Data "Data to be send"
*   \Parameters (out):   void
*****/
Void Can_SendData(Can_DataType Data);

/*****
*   \Description      :   function to Receive Data from CAN Bus
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Non_Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   Can_DataType "uint 32"
*****/
Can_DataType Can_ReceiveData (void);

```

4)Door Sensor :

```

/*****
*   \Description:  function to Intialize Door sensor Module
*   \sync\Async   :   Synchronous
*   \Reentrancy   :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****/

void DoorSensor_Init(void);

/*****
*   \Description      :   function to  Get light status
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   Light_Type light
*   \Parameters (out):   Boolean
*****/

Boolean Get_DoorSensorValue(void);
```

5)Light_Switch:

```

/*****
*   \Description:  function to Intialize Light Switch Module
*   \sync\Async   :   Synchronous
*   \Reentrancy   :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****/

void LightSwitch_Init(void);

/*****
```

```

*   \Description      :   function to Get light Switch Value
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****/
Boolean Get_LightSwitchValue(void);

```

6)Speed_Sensor:

```

/*****
*   \Description:   function to Intialize Speed Sensor Module
*   \sync\Async :   Synchronous
*   \Reentrancy :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****/

void SpeedSensor_Init(void);

```

```

/*****
*   \Description      :   function to Get Speed Sensor Output
*   \sync\Async       :   ASynchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   SpeedSensor_Type
*****

SpeedSensor_Type Get_SpeedSensorOutput(void);

```

```

/*****

```

```

*   \Description      :   function to Get Speed Sensor processing
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****/

void SpeedSensor_StartSensorProcessing(void);

```

```

/*****
*   \Description      :   function to Stop Speed Sensor Processing
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****

void SpeedSensor_StopSensorProcessing(void);

```

4)Comm._Mng.:

```

/*****
*   \Description      :   function to Manage Interactions between App and Mcal
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Non_Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   E_Ok
*
*                       :   E_Nok
*****/

ErrorStatus CommMgr_Send(u8 Bus_Id , Mng_DataType Data);

```

5)Car_Status:

```

/*****
*   \Description      :   function to Initialize All Car_modules
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****/
void CarStatus_Init(void);

```

```

/*****
*   \Description      :   function to Process LightSwitch Modules
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****/
void CarStatus_LightSwitchProcessing(void);

```

```

/*****
*   \Description      :   function to process Speed Sensor
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****/
void CarStatus_SpeedProcessing (void);

```

```

/*****

```

```

*   \Description      :   function to process DoorSensor
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****/
void CarStatus_DoorProcessing (void);

/*****
*   \Description      :   function to Send Car Status
*   \sync\Async       :   Synchronous
*   \Reentrancy       :   Reentrant
*   \Parameters (in) :   void
*   \Parameters (out):   void
*****/
void CarStatus_CanTransmitter (void);

```
